

Abstract

The present invention aims to provide a seamless glove of high support performance knitted by flat knitting.

5 The seamless glove has a base knitted fabric set up knitting from a tip of finger toward a mouth or from the mouth toward the tip of finger and knitted in such a manner that respective fingers, a four-finger body, a five-finger body are knitted on a rib knit structure basis using a stretch elastic yarn, and an elastic yarn in a tensed state is inlaid in the base
10 knitted fabric. The base knitted fabric is knitted on a rib jacquard structure basis, and the inlay yarn is knotted at a location at which the knitting of the finger starts and at a finger crotch part, to prevent cast-off of the inlay yarn.
